Best Mattress Stores in Edmonton

Sleepology - The Science of Sleep

Uses the most advanced technology in the WORLD and over 1664 sensors to map body surface pressures to create an image that ultimately reveals pressure points on your body that can be relieved by the RIGHT mattress. This computerized diagnostic process of obtaining this high-resolution body pressure image is called our Body Analysis. The Body Analysis will provide you with a Sleep iD (individual diagnostic #) which will then be used to find a mattress that's most suited to you!.

Pillows & Pillow Protectors

We all know how important finding a comfortable mattress is for quality sleep,but it's also essential to invest in the right pillow .Around 30 % of correct spinal alignment is a direct result of having the right pillow so a correct fitting pillow helps you wake up feeling truly refreshed, prevents headaches, neck pain, and arm numbness.

Do not forget to buy a Pillow Protector that will significantly extend your pillow lifespan while protecting against allergens & dust mites. Remember, you basically never wash your Pillow, that's why you need to keep it clean.
