CARBOXY THERAPY MASK PACK: A SAFE AND EFFECTIVE SOLUTION FOR SKIN CONCERNS

WHAT IS CARBOXY THERAPY AND HOW DOES IT WORK?

This is a non-surgical aesthetic treatmentthat involves the use of CO2. Especially, a CO2 mask pack and a CO2 body mask have been shownto be effective in treating stinging, acne, cellulite and atopic dermatitis. It works without injecting CO2 into the skin. They consist of GEL and sheet MASK. Once CO2 is absorbed into the skin, more CO2 is supplied to the skin texture and the metabolism of the skin is palpated.

THE BENEFITS OF THIS PROCESS INCLUDE:

IMPROVED BLOOD CIRCULATION

Oxygen-rich blood improves microcirculation,offering vital nutrients to the skin and carrying away waste products. It leads to a healthy, glowing complexion.

STIMULATED COLLAGEN PRODUCTION

It promotes the cells responsible for producing collagen, helping to firm and tighten the skin and reducing fine lines and sagging.

ENHANCED CELL REGENERATION

The restored cells can repair and restore more effectively, leading to smoother texture and a better skin tone.

CARBOXY THERAPY- ADDRESSING AWIDE RANGE OF SKIN CONCERNS

Are you dealing with aging or specific skin imperfections? This mask pack offers a targeted approach. This can handle different facial skin concerns, including fine lines and wrinkles, dull and uneven skin tone, loss of skin elasticity, large pores, and dehydrated skin.

CONCLUSION

Carboxy therapy treatment leads to healthy and vibrant skin. The mask pack provides a genuinely safe skin treatment. Daejong Medical is a Korean cosmetic and medical device manufacturer and the manufactures Co2 mask pack, derma roller and others as OEM and ODM based. Order now! Learn more at www.daejongmedi.com.
