Event Rental Software

Inventory, orders, routes, and crew work in one system

Take bookings, check availability, invoice customers, and build delivery routes without moving the order between systems.

> *"RentKit is the third software I've had, and the first two were so much more difficult and time-consuming to set up. I set up RentKit in a couple of hours, including adding all my inventory, prices, etc. I hardly even had to watch any of the help videos. It's also much less expensive than competitors, and I love that there is no limit on how much inventory can be added, or confusing pricing. That makes everything so much easier."*

Built around an event rental order

RentKit was built by people who run rental companies. That changes the details: a quote becomes an order, the order drives the pull sheet, and the same record follows the truck through delivery and pickup.

Availability covers the full rental period and any turnaround time after return. Warehouse staff can also see which items need cleaning, inspection, or repair before the next order.

Get each order ready before it reaches the loading door

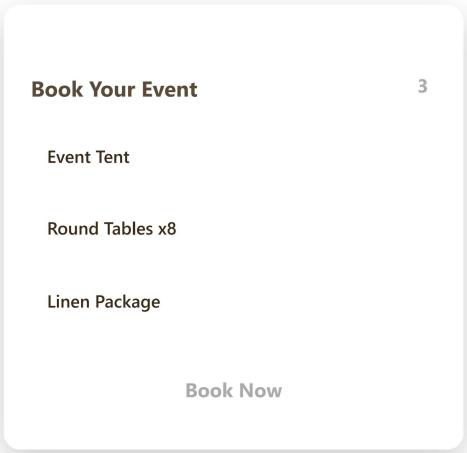

The Prepare Items report gives the warehouse one place to mark items cleaned, inspected, repaired, and ready to load.

A calendar shows upcoming orders and the items on each one. Staff can flag a repair or purchase, follow up on it, and mark the item complete when the work is done.

Calendar View For Rental Orders

The same order reaches every department

Office, warehouse, and delivery crews see the same details

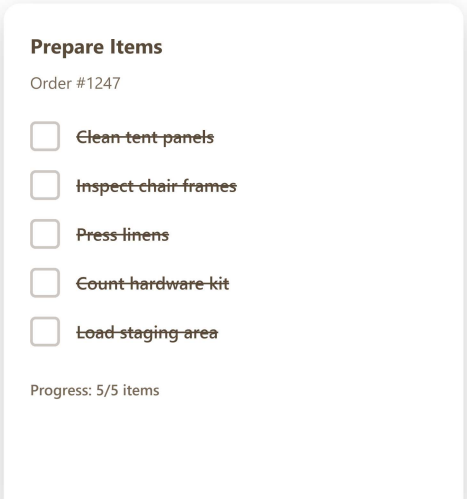

Sales

With a simple integration, you can now show availability of items in relation to the dates being selected. Customers view items directly on your website. Online booking ensures you don't lose out on potential business while providing peace of mind.

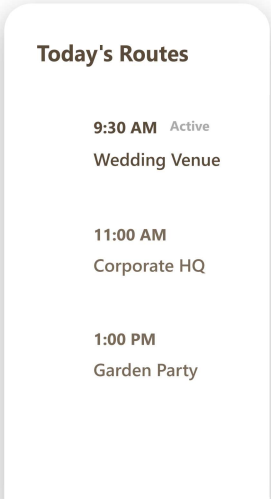

Office

The stock availability page shows office staff what they can book on a given date. They can answer customers without calling the warehouse or checking a second system.

Warehouse

Delivery

Warehouse

Preparing items in RentKit is a breeze. Like air, give your team a list of what needs to go out on any day. Update the status of each item through the cleaning process. Flag issues & if sub-rental or additional purchasing is needed, record that too!

Delivery

Handling multiple deliveries per day can be a nightmare! RentKit offers an industry specific route scheduling feature that integrates with our mobile apps so your drivers can deliver orders with ease per your specifications.

Built by rental owners

For Rental Companies

We run rental companies ourselves and use RentKit in those businesses. Product decisions start with the work our office, warehouse, and delivery crews need to finish on a busy day.

Why Choose RentKit For Your Event Rentals?

Get a Demo

Inventory Turn-Around Times

Apply a turn-around time for each item to allow your team to process returns and clean/repair items before they're labeled rent-ready.

Bundle Items

If you rent tables, dance floors or other items that have sub-component requirements, you know that keeping track can be tricky. This is why RentKit's bundle-item feature allows you to add sub-components to ensure whatever size tent you're building, you have the right pieces for the job.

Efficient Delivery Routing

Build delivery and pickup routes with multiple stops, then assign each route to a truck and crew. Drivers work from the RentKit app on Android or iOS.

Choose the right plan for your business

- No Hidden Fees Or Tricky Pricing
- Switch Plans Anytime
- No Credit Card Required
- No Contracts
- Unlimited Users On All Plans
- Unlimited Items On All Plans
- Simple Pricing Breakdown
