Why the 2000 lb Electric Powered Tugger Is a Smart Warehouse Investment

For warehouses and production lines, the ongoing challenge is to get products moving quickly, safely and less manually. Here's why the 2000 lb electric powered tugger is becoming a favorite among companies ranging from light manufacturing to distribution centers. It provides just the right amount of power, handling capabilities and usability for everyday material handling applications.

While the heavier-duty tuggers are used in industrial towing applications, the 2000 lb capacity type is ideal for facilities that require towing power without the weight. Ideal for transport of carts, small racks, totes and lighter pieces of equipment in aisles, production lines and loading areas whilst reducing the physical strain on your team.

The Benefits of Going Electric

One of the most frequent sources of strain injuries in the workplace are the manual pushing/pulling of loaded carts. An electric tugger takes the strain from the operator, eliminating the risk. The operator doesn't have to push or pull a loaded cart, as the motor does the work; all the operator has to do is guide the cart.

Not only does this safeguard your employees but it improves productivity as well. Multiple carts can be pulled by a single operator in a single trip, decreasing repetitive walking and total labor hours. That efficiency increase is important if a company is trying to “do more with less.”

What Makes a Good 2000 lb Electric Powered Tugger

A few things differentiate the good tug from the great tug when comparing tugs in this capacity range:

- **Battery performance** — long cycle life in batteries keeps the operations going from shift to shift.
- **Compact turning radius** — necessary in small aisles and congested areas.
- **Ergonomic handle design** — minimises the operator's fatigue when using it for a long period of time.
- **Durable construction** — steel frames and quality parts provide for a unit that will last through daily use.
- **Manufacturer expertise** — specialists with knowledge of load requirements and floor layout.

This is where the Superlift Material Handling comes in. Superlift Material Handling Inc. has one of the most well rounded lines of equipment in the industry, from the 500lb skid lifter to the table that handles 100,000lbs — all of it. Their electric carts and tuggers are designed for the most demanding daily applications and all come with world class customer service and one of the best warranties in the industry.

When it comes to the **2000 lb electric powered tugger** market, Superlift's application specialists will help you consider your load types, layout, and shift needs and recommend the appropriate model instead of just giving you a standard model. Their attitude is that of always calling them first when you have an ergonomic concern and you will like their attitude.

Conclusion

A 2000 lb electric tugger isn't just an added convenience, it is a necessary enhancement to help keep your team safe and to save time during the day. This equipment can have a significant impact on the efficiency of your facility with the proper capacity and support.
